

Locations vs Tags in Boxtribute - what's the difference?

Reference

Boxtribute gives you tools to organise your stock: Locations and Tags. It's helpful to use them to know exactly where stock is and who it is for. It can also support with donor reporting as you can tag to the donor, project and budget cycle. Understand what thresholds you have - where stock is in your warehouse, freeshop, or various bases.

Locations and Tags

Physical Locations

Identifying Tag

Manage Tags

+ Create Tag

☐	NAME	APPLY TO	DESCRIPTION
☐	FHH	Beneficiary	Female Head of Household - v
☐	PLW	Beneficiary	Pregnant and Lactating Woma category
☐	ECHO	Box	ECHO 2025 - 2026
☐	Project Cycle...	All	Project Cycle SNFI 2025 - 2026

Locations

- What it is

A physical area in your warehouse
- Use it for

Where stock is stored
- Example

"Shelf A", "Incoming Area", "Clothing Zone"

Tags

- A tag you add in the boxtribute app that allows you to filter and sort
- Grouping boxes by purpose, recipient, donor, beneficiary vulnerability etc.
- "PLW", "Project cycle 1234", "Donor: UNHCR"

Find, filter, and sort stock easily using Locations and Tags

Locations · ≈ 10 MIN TO SET UP

THE REQUIREMENT — IN YOUR WORDS

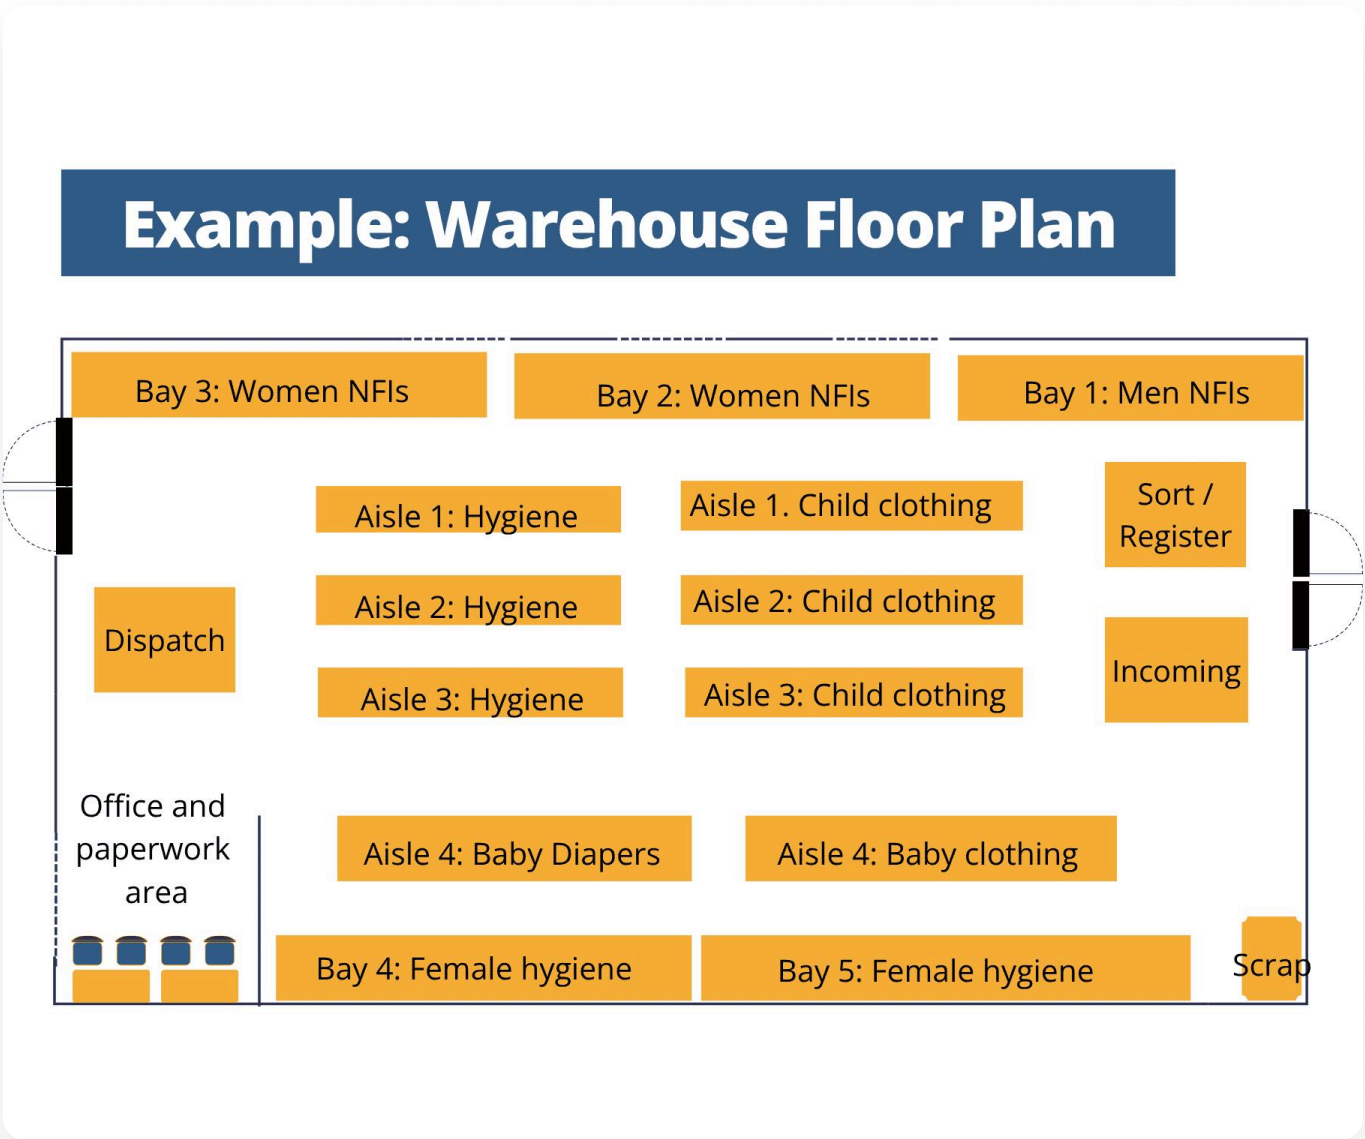

Our warehouse has multiple rooms and sections, and it takes Staff a lot of time to look through and search for the boxes we need. How do we set up Boxtribute so that the system can quickly find and tell us where things actually are?

1

Identify the key areas in your warehouse(s)

Whether it's a makeshift storage hub in a garage or a professional warehouse space, having clear zones and storage areas helps the logistics of inbound and outbound aid delivery flow smoothly.

Tip: When picking storage areas for different types of items, consider any special storage requirements for stock (e.g. heavy items, temperature control, protection from sunlight/water, keeping it away from walls to prevent vermin), as well as staff safety. Make sure you secure storage areas to prevent accidents and injuries.

Consider how stock is coming into and leaving the warehouse. Try to organize the warehouse so stock flows smoothly as it comes into and goes out of the warehouse. Try to minimize the need to carry things back and forth, especially by hand. The team should sit together and identify zones in the warehouse and allocate these in Boxtribute - You will most likely need at least the following activity areas:

- 1. Incoming
- 2. Sort / Label / Register
- 3. Storage
- 4. Outgoing stock

Clear signage will help the warehouse team do their best. Even in makeshift storage hubs, you can use color masking tape and cardboard signs to clearly identify different warehouse areas.

2

Set up Locations

Set up Locations so that they match warehouse storage areas will help you easily find where items are in your available spaces.

Tip: If the needs served by the warehouse change, you can add, edit, or archive locations at any time.

WAREHOUSE LOCATIONS

In Use

Archived

+ Add a location

Warehouse Locations	Default Status of Boxes	Number of Instock boxes
☐ WH 1, Refrigeration	Instock	0
☐ WH1, Aisle 1: Hygien	Instock	0
☐ WH1, Aisle 2: Childr	Instock	0
☐ WH1, Aisle 2: Womens	Instock	0
☐ WH2, Loft	Instock	128
☐ WH2, Floor Left	Instock	171
☐ WH2, Floor R (Scrap)	Scrap	0
☐ Stockroom	Instock	147
☐ FreeShop	Donated	0
☐ Donated location	Donated	0

Create a location for each warehouse and zone. Choosing clear names will help you to find stock quickly and easily. Keep names short and consistent to allow for easy allocation and sorting.

- 1. Go to Coordinator Admin → Edit Warehouses
- 2. Select [+Add Location] and enter the location label, pick the default status of Boxes, then select 'Save and Close'.

3. Example location naming:
- WH 1, Refrigeration
 - WH 1, Aisle 1: Hygiene & Health
 - WH 1, Aisle 1: Medical Supplies
 - WH1, Aisle 2: Baby and Children
 - WH1, Aisle 2: Womens' Clothing
 - WH2, Loft
 - WH2, Floor Left
 - WH2, Floor Right (Scrap)
 - WH2, Outbound Area 1

3

Use Tags

Tags allow you to categorize and sort your stock and/or beneficiary data to allow for easy filtering, planning and reporting.

Tip: You can filter your entire stock view in both Manage Boxes and in the Dashboard by tag - useful before a distribution or when preparing a report.

Manage Tags

+ Create Tag

☐	NAME	APPLY TO	DESCRIPTION
☐	FHH	Beneficiary	Female Head of Household - Vulnerability category
☐	PLW	Beneficiary	Pregnant and Lactating Woman - Vulnerability category
☐	ECHO	Box	ECHO 2025 - 2026
☐	Project Cycle...	All	Project Cycle SNFI 2025 - 2026
☐	wall	Box	Storage along warehouse wall
☐	west	Box	West area in the Warehouse
☐	Site	Box	Boxes not in the Warehouse but on the site. Usually for large bulky items

It is recommended to add tags based on your distribution planning needs, or data that you may need to pull for your programming and reporting needs. Commonly created tags may relate to project cycle, vulnerability or expiry date.

1. Go to Coordinator Admin → Manage Tags
2. Select [+ Create Tag] and enter the tag category, what it should apply to (beneficiaries, boxes or

both) a color for easy sorting and the description, then select ‘Save Tag’.

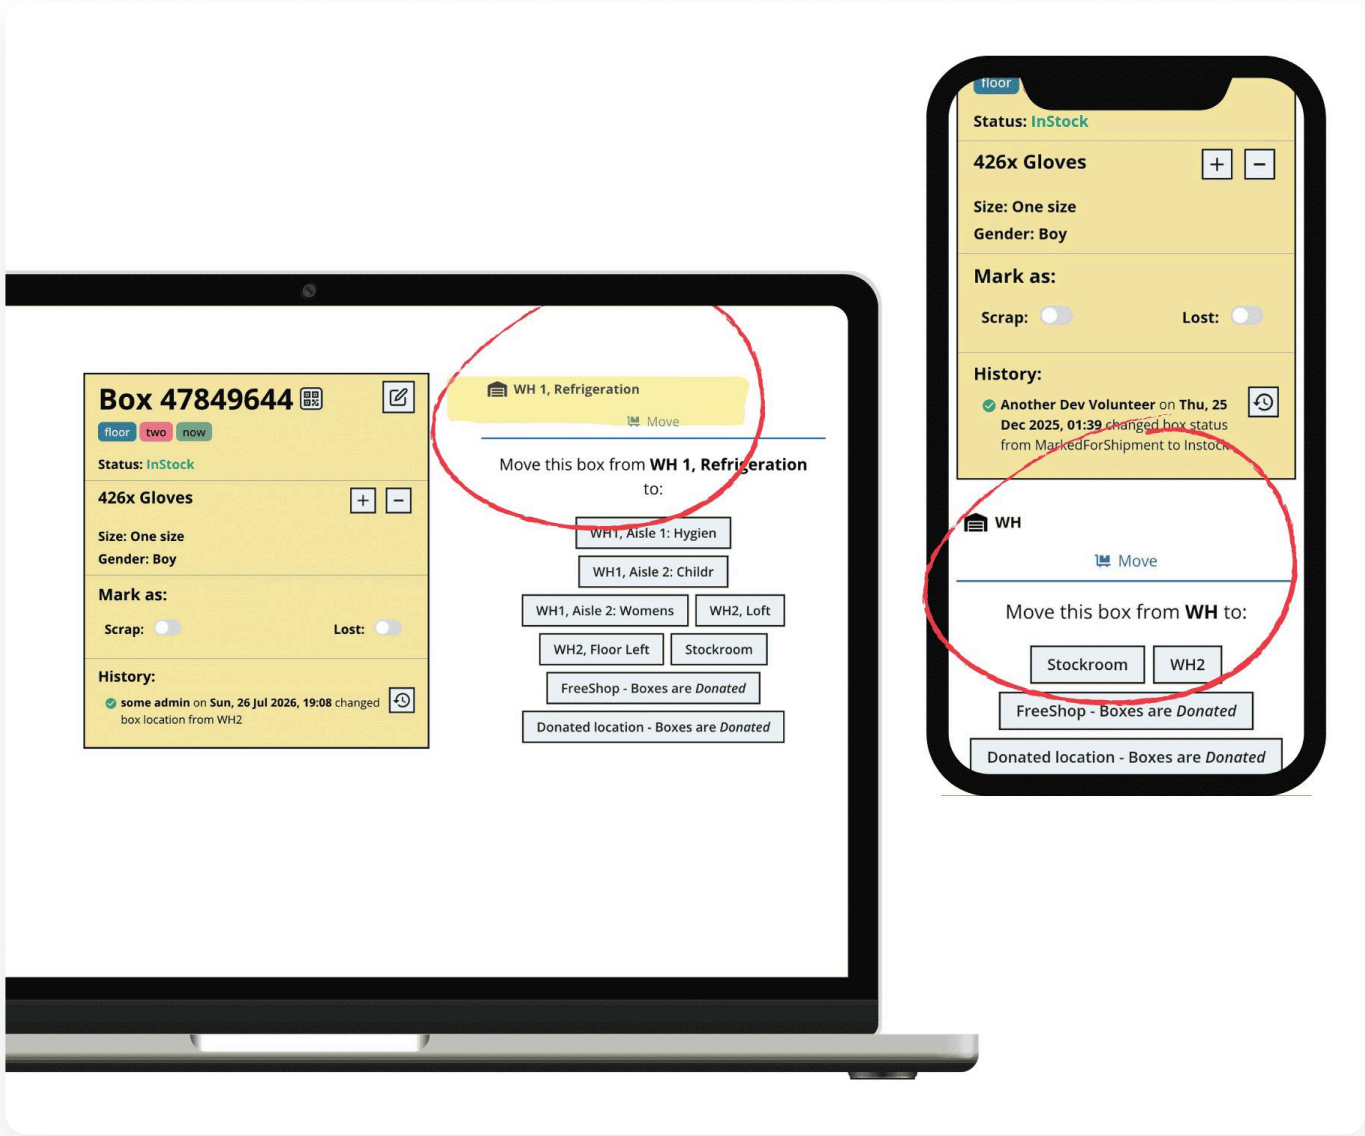

3. Examples frequently include:
- By recipient: 'PLW (pregnant and lactating woman)', 'NA (new arrivals)' 'FHH (female head of Household)'
 - By project or donor: 'Project cycle 1234', 'Winter Kit', 'ECHO', 'UNICEF'
 - By partner category: 'NGO X, Greece', 'NGO Y, Syria'

4

Move boxes into the right location

How to move your boxes into different locations

Tip: You can also move boxes in bulk on mobile by selecting the “MULTI BOX” scan option; on desktop, you can select multiple boxes from the Manage Boxes screen, then move them using the move button at the top of the table.

When stock arrives or moves, update the location in Boxtribute immediately. This keeps your live stock view accurate. To move boxes into a location:

- On Mobile / inside the warehouse

 1. Select “Scan QR Label” from the mobile menu, and make sure the “SOLO BOX” option is selected
 2. Once the camera viewer shows, point it at any box QR code label to pull up its information
 3. Select the location you want it to move to under the “Move” section
- On Desktop

 1. Go to Aid Inventory -> Manage Boxes
 2. Search or filter for the box you want, then select its row on the table
 3. Select the location you want it to move to under the “Move” section

5

Use filters to find what you need

Plan for your distribution, search by vulnerability - how to use tags to search through your data to help with your planning.

Combine location and tag filters to drill down quickly and pull the data you are needing. For example; you can export a report showing a tag 'winterization kits' and the 'project cycle' which will show how many winterization kits you have donated from that donor and at which location so you can plan for your upcoming distribution.
