Control who can see what in Boxtribute

Manage Users · ≈ 5 MIN TO SET UP

THE REQUIREMENT — IN YOUR WORDS

We need different people to have different levels of access - only volunteers who have received the protection training should interact with beneficiaries, and managers need oversight of the whole warehouse.

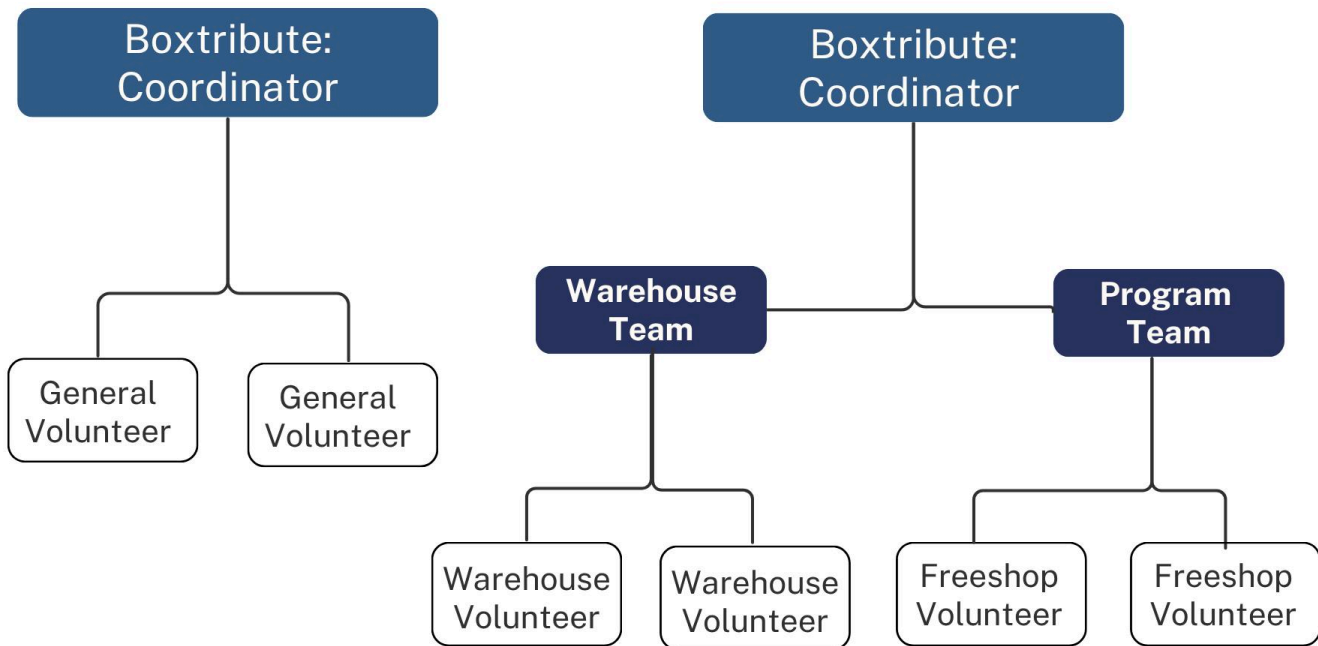

1

Understand what each role can do

Boxtribute comes with preset roles for the most common jobs in aid response. Take a look at our recommendations for the two most common setups.

Tip: Coordinators can see both warehouse and beneficiary activities.

Example: Response Team Set-up

General Team: Most common in an ad-hoc emergency response, this setup usually involves response teams who work across multiple functions with one manager overseeing the work. For this, we recommend:

- Assigning General Volunteer for team members;
- Assigning Coordinator for the overseeing manager.

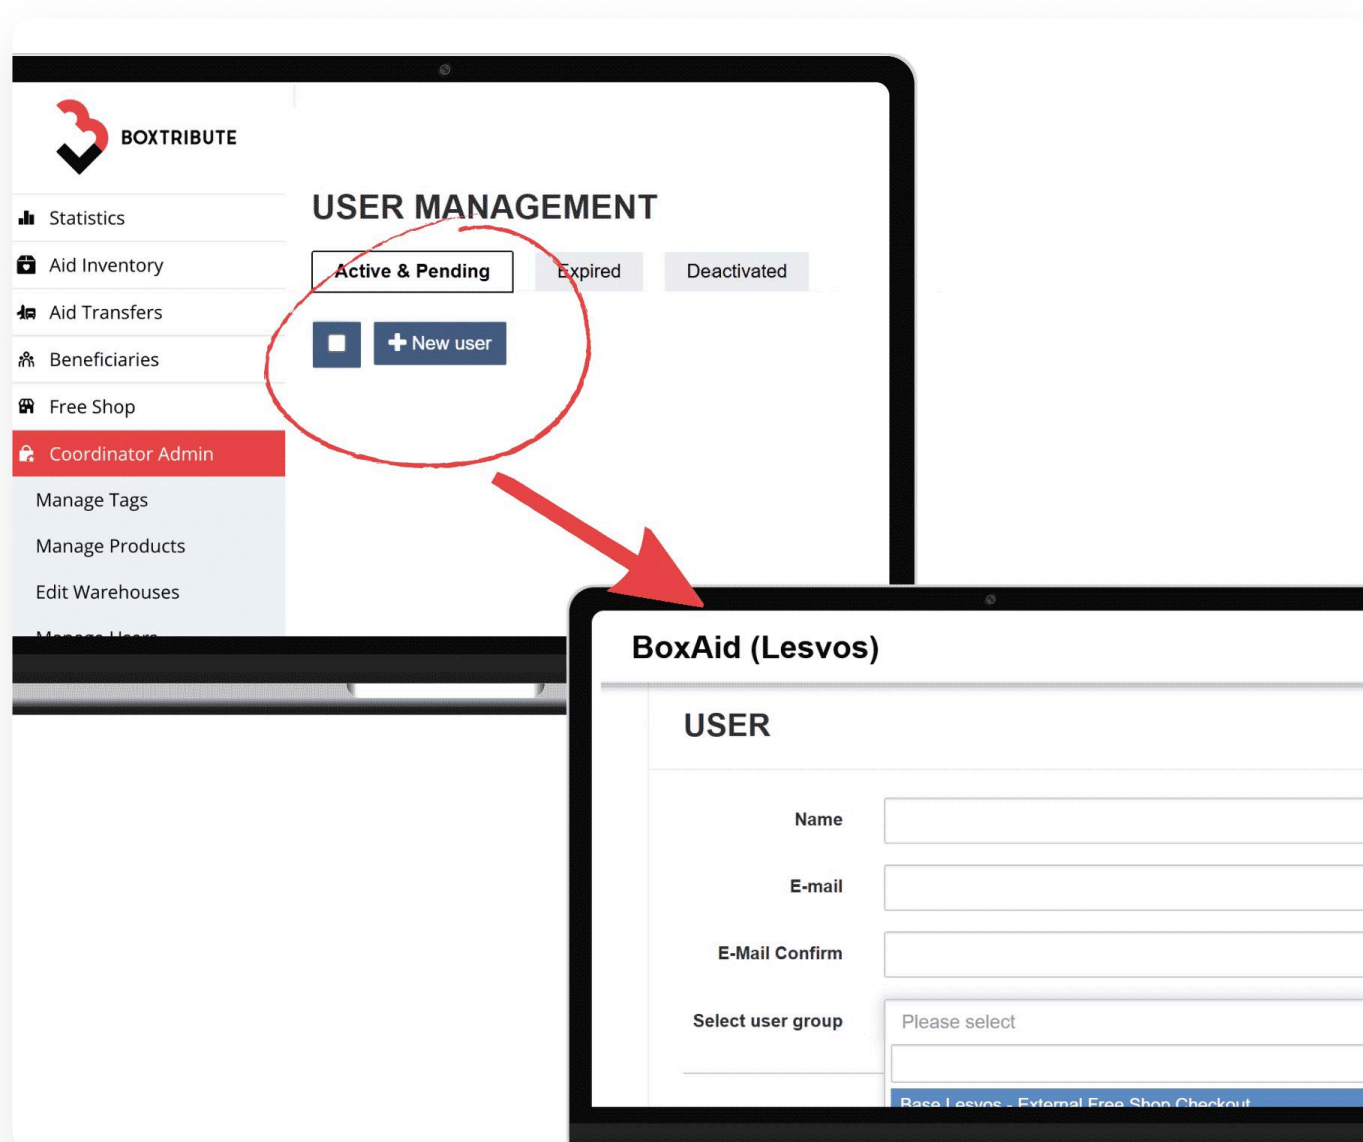

Separate Logistics and Beneficiary-Facing Teams: For projects with a stricter separation between team members working with beneficiaries and those working in the warehouse, we recommend:

- Assigning Volunteer (Warehouse) for logistics team members;
- Assigning Volunteer (Free Shop) for beneficiary-facing members;
- Assigning Coordinator for overseeing managers of both teams.

2

Invite your team

Tip: It is good to allocate all staff individual logins, even if it is just for the short term, as this allows you to see activity per role and quickly identify operational issues.

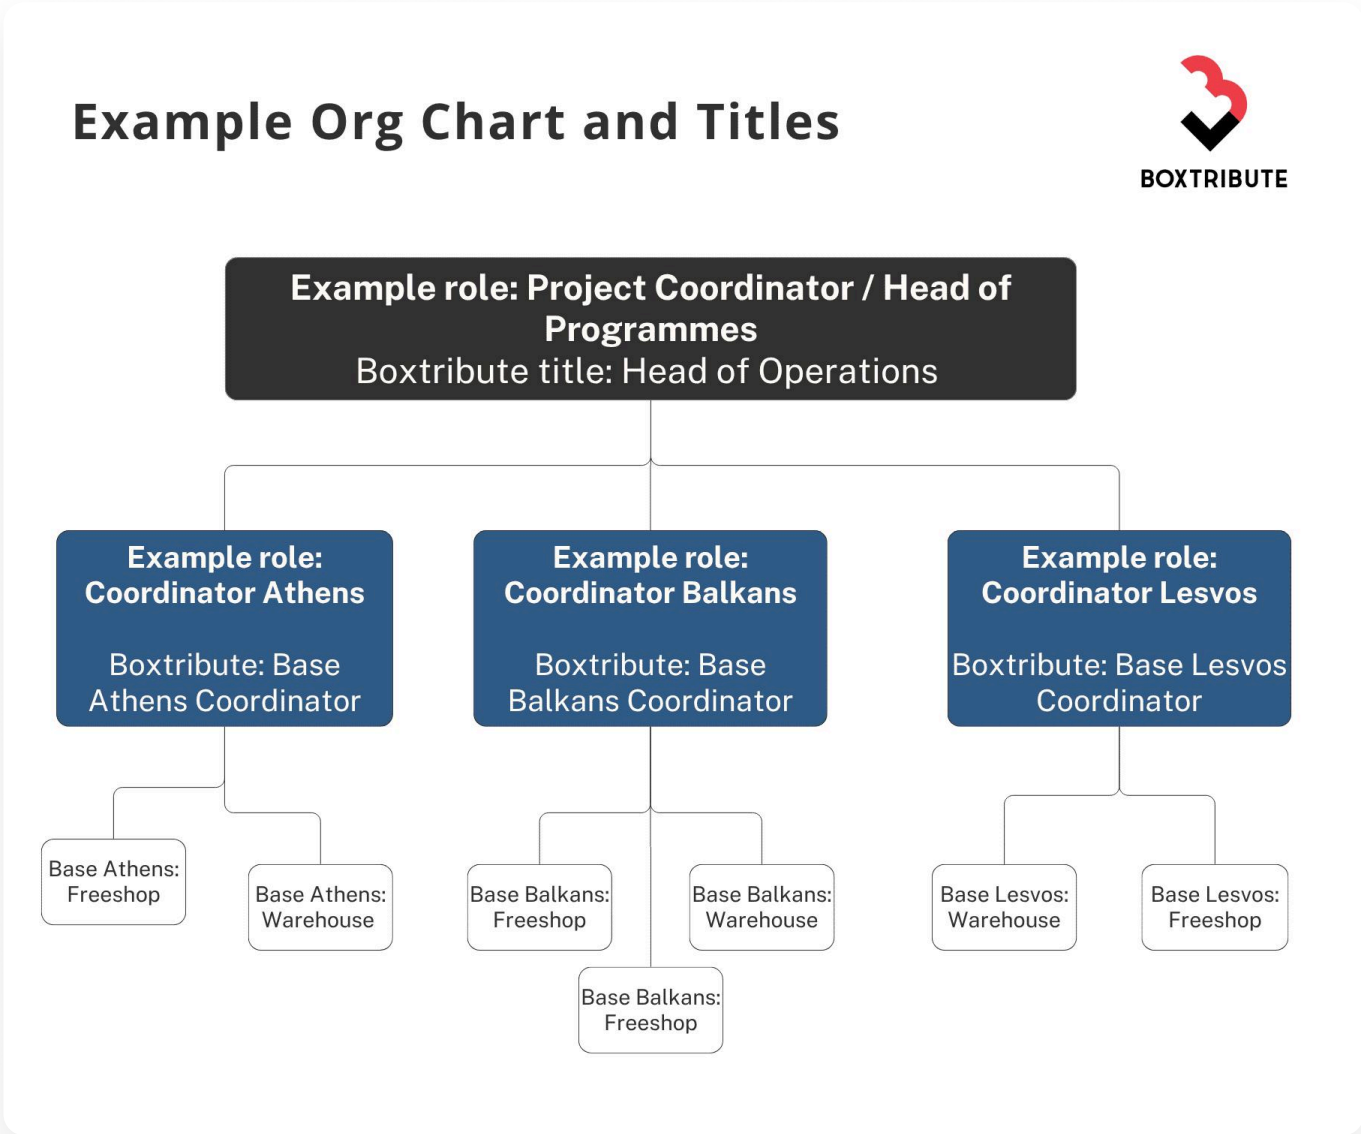

Select [+ New User] and enter the name and email of your team member, pick the role that aligns with their job, then select "Save and Close". The team member will receive an email inviting them to sign into Boxtribute; access begins immediately.

3

Managing multiple teams across the organisation

Tip: People assigned to the Head of Operations role can see all data and users across all bases in the organisation.

Boxtribute separates each operational unit by “base”, short for “base of operations”. Usually, bases are separated by physical locations (e.g., Base: Balkans vs. Base: Athens), but “base” can also be used to fully separate project teams or workstreams. Staff are assigned individually to a base and can only see and work with data in the bases they are assigned to.

4

Managing Handover

What to do when someone leaves or changes their role

Tip: Never delete a user account. Deactivating keeps the audit trail intact. You can view all deactivated users in the “Deactivated” tab in Manage Users.

☐ Jane Doe	jane.doe@boxaid.co	Head of Operations		
☐ Head of Operations	stagingenv_headofop	Head of Operations		
☐ Dev Head of Operations	dev_headofops@box	Head of Operations		

When someone leaves or transitions into a new role, you can easily assign a new role to their account, or deactivate them. If you are changing coordinators, we recommend using the “Valid from” and “Valid until” fields to schedule overlapping access between incoming and outgoing coordinators. Deactivated or Expired users with the Volunteer role can always be activated by users with a Coordinator or Head of Operations role. Deactivated or Expired users with a Coordinator role can only be activated by a user with a Head of Operations role.
